Report of Seminar Conducted For B. Tech Student

Topic: - "SOLAR PANEL TECHNOLOGY"

Speaker: MR. TABISH MOHAMMAD

Date: - 11/12/2021

Time: - 10:00 AM- 12:30 PM & 02:00 PM-04:30 PM

Venue: - A Block Lab

This program is organized by Department of ECE to benefit and enhance the skill of B. Tech 2nd Year and 3rd Year students. Approximately 147 students have benefits by this program.

- In 1839, the ability of some materials to create an electrical charge from light exposure was first observed by the French physicist Edmond Becquerel. Though these initial solar panels were too inefficient for even simple electric devices, they were used as an instrument to measure light.

OBJECTIVES:-

- Energy independence: To provide reliable and sustainable electricity to households, communities, and businesses, thereby reducing dependence on grid-tied electricity or fossil fuels.
- Solar panels collect clean renewable energy in the form of sunlight and convert that light into electricity which can then be used to provide power for electrical loads.

FUTURE OUTCOMES:-

- Solar panels are becoming more efficient at converting sunlight into electricity. This means that the same size panel is able to generate more electricity, which can reduce the overall cost of a solar energy system.
- The future of solar energy in India looks promising, with significant growth expected in the coming years.
- The government of India has set a target of achieving 175 GW of renewable energy capacity by 2022, with 100 GW of this coming from solar energy.

REPORT OF TRAINING CONDUCTED FOR MCA STUDENTS

Topic- Cloud Technology Training

Speaker- Mr. Amit Srivastava

Date- 11/12/2021

Time- 10:00 AM

Venue- B Block Lab

Approximate 60 Students have joined this Training.

Cloud computing refers to services like storage, databases, software, analytics, and other platforms that are accessible via the internet. It is any service that can be delivered without being physically close to the hardware. For example, Netflix uses cloud computing for its video streaming services. Another example is G Suite, which runs entirely on the cloud. Simply put, Cloud Computing refers to the delivery of on-demand resources (such as a server, database, software, etc.) over the internet. It also gives the ability to build, design, and manage applications on the cloud platform. The term cloud refers to a network or the internet. It is a technology that uses remote servers on the internet to store, manage, and access data online rather than local drives. The data can be anything such as files, images, documents, audio, video, and more. And Small as well as large IT companies, follow the traditional methods to provide the IT infrastructure. That means for any IT company, we need a Server Room that is the basic need of IT companies. In that server room, there should be a database server, mail server, networking, firewalls, routers, modem, switches, QPS (Query Per Second means how much queries or load will be handled by the server), configurable system, high net speed, and the maintenance engineers. To establish such IT infrastructure, we need to spend lots of money. To overcome all these problems and to reduce the IT infrastructure cost, Cloud Computing comes into existence.

Objectives

- File storage. ...
- Big Data Analytics. ...
- Data backups and archiving. ...
- Disaster recovery. ...
- Software testing and development. ...
- Communication
