### Report of Seminar Conducted For B. Tech Student

**Topic: - MATLAB**

**Speaker: Mr. Vaibhav Aggarwal**

**Date: - 09/11/2019**

**Time: - 10:00 AM- 12:30 PM & 02:00 PM-04:30 PM**

**Venue at: A – Block lab**

This program is organized by Department of ECE to benefit and enhance the skill of B. Tech 2<sup>nd</sup> Year and 3<sup>rd</sup> Year students. Approximately 147 students have benefits by this program.

- MATLAB was invented by mathematician and computer programmer Cleve Moler. The idea for MATLAB was based on his 1960s PhD thesis.
- The first early version of MATLAB was completed in the late 1970s. The software was disclosed to the public for the first time in February 1979 at the in California. Early versions of MATLAB were simple with 71 pre-built functions.

### OBJECTIVES:-

MATLAB<sup>®</sup> is a programming platform designed specifically for engineers and scientists to analyze and design systems and products that transform our world. The heart of MATLAB is the MATLAB language, a matrix-based language allowing the most natural expression of computational mathematics.

### FUTURE OUTCOMES:-

- Use MATLAB effectively to analyze and visualize data.
- Apply a top-down, modular, and systematic approach to design, write, test, and debug sequential MATLAB programs to achieve computational objectives.
- Design and document computer programs and analyses in a careful and complete manner so as to effectively communicate results, to facilitate evaluation and debugging by another programmer, and to anticipate and resolve user errors.

# DEPARTMENT OF ME

Session 2019-20

## REPORT ON INFORMATION AND COMMUNICATION TECHNOLOGY.

TOPIC: WORKSHOP ON DATA ANALYSIS.

SPEAKER: Mr. Faisal Ullah Khan

DATE: 23/11/2019

TIME: 02:00 pm-05:00pm

VENUE: A Block seminar hall

This workshop is conducted by Department of ME to improve technical and computing skills of ME students. Approximately 60 students have benefits by this workshop.

- Data analysis is rooted in statistics, which has a pretty long history. It is said that the beginning of statistics was marked in ancient Egypt as it took a periodic census for building pyramids.
- Data analysis is a process that begins with retrieving data from various sources and then analyzing it with the goal of discovering beneficial information.

### OBJECTIVES:-

Identifying trends and patterns, Making data-driven decisions, Finding correlations and relationships, Detecting anomalies, Improving performance, and Predictive modeling.

### FUTURE OUTCOMES:-

- The ability to think analytically and approach problems in the right way is a skill that's always useful, not just in the professional world, but in everyday life as well.
- This is the obvious benefit to learning data analytics, and the one most often focused on by students in higher education.

Data analysis tools help companies draw insights from customer data, and uncover trends and patterns to make better business decisions. There are a wide number of online data analysis tools you can make use of, whether you want to perform basic or more advanced data analysis. Data analysis tools help researchers make sense of the data collected. It enables them to report results and make interpretations. How the data is analyzed depends on the goals of the project and the type of data collected.

## Objectives

- Assessment and improvement of the quality of the data.
- Compare the target population with the population being studied (sampling population).
- Assessment of the measures of frequency (such as mean, median, mode, etc.) and their amount.
- Assessing, i.e. how much strong relationship exists among the variables.
- Measurement of the degree of ambiguity.

## Future Outcomes

As the field of Data Science continues to evolve, it's worth examining where big data analytics is heading in the future. From the rise of edge computing to the adoption of advanced artificial intelligence algorithms, there are many exciting developments on the horizon that will shape the future of big data analytics. Here are a few. And Automation and Data Ops (Data Operations) are emerging technologies that improve data analytics by streamlining and automating various tasks involved in the data pipeline. By automating processes such as data quality checks and version control, Data Ops can improve the accuracy and efficiency of data analytics while also reducing errors.
